

# The Bovis Units: Measuring Vital Energy

Energy Measurement  
Bovis units measure  
vital energy.

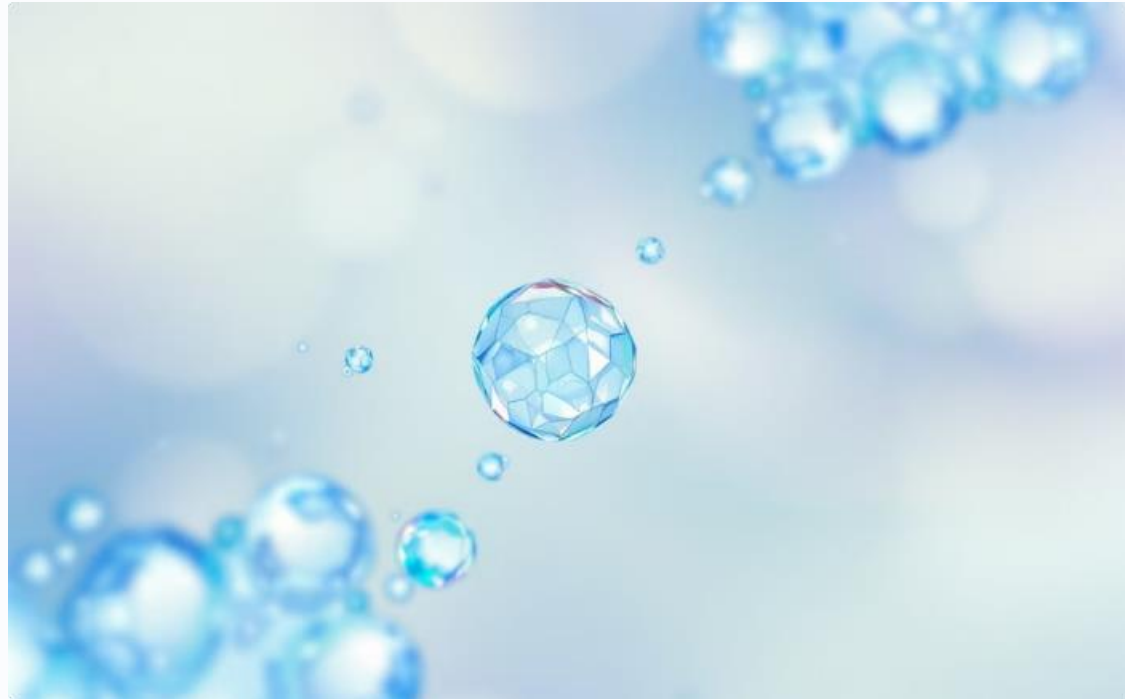

Vital Environments  
and Foods  
They evaluate the  
energy of  
environments and  
foods.

Physical Well-being  
Improve your health.

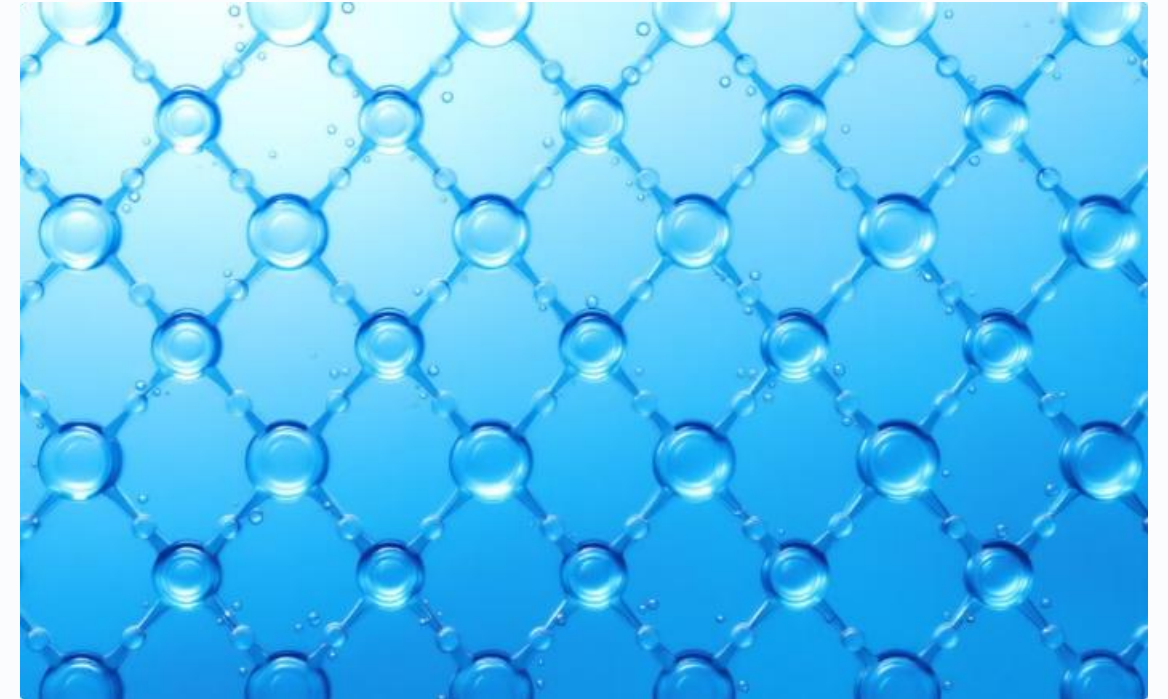

# Structured Water: A New Vision

## Beyond the Chemical Formula

A journey that goes beyond the simple chemical formula ( $H_2O$ ).

Let's explore structured water, a broader concept than its chemical composition.

## Molecular Structure

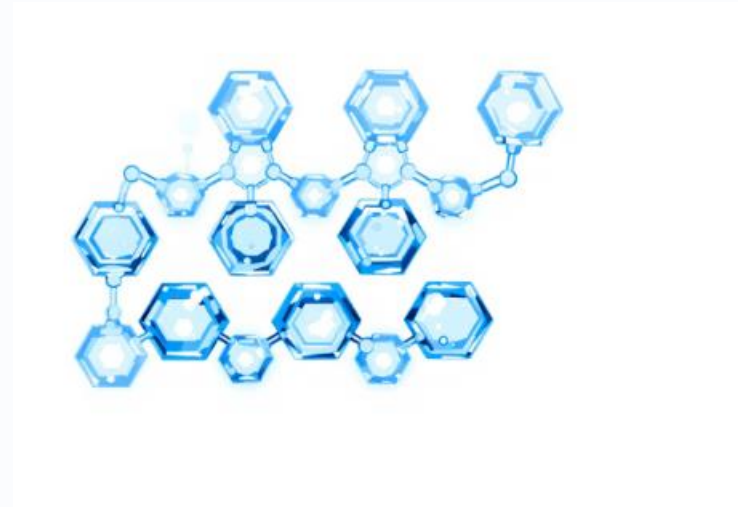

We delve into the world of the molecular structure of water.

# Beyond the Chemical Formula of Water

## Chemical Formula (H<sub>2</sub>O)

The basic chemical composition of water.

## Physical Structure

Water, beyond its chemical composition, has a physical structure.

## Influence on Properties

This structure influences its properties.  
Understanding this concept is fundamental.

# Molecular Aggregation States

## Microcluster

Water just out of the spring has a molecular structure with microclusters, small aggregations of molecules.

## Macrocluster

As the water travels to the faucet, the molecules aggregate to form macroclusters, larger and less reactive.

The process of molecular aggregation  
is influenced by the path of water.

Pipes and deposits alter its structure,  
creating macroclusters.

With IWS a More Reactive Water

Structured water, with microclusters,  
is more reactive and bioavailable,  
because the molecules can interact  
more easily with cells.

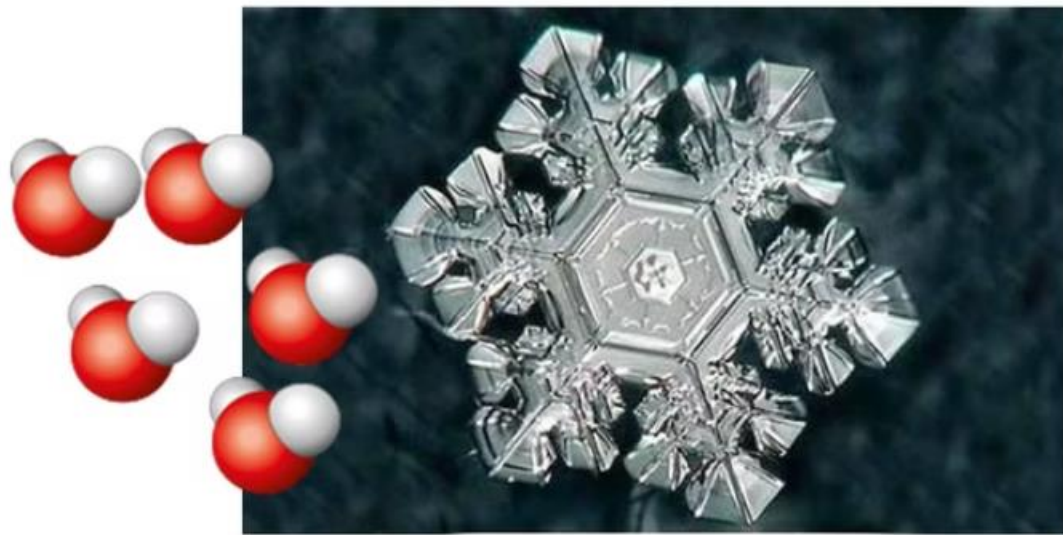

# WATER AT THE SOURCE

Microcluster

(LIVING WATER)

small clusters of 5,6 molecules

Water has a high energy and is  
composed of beautiful and  
regular crystals

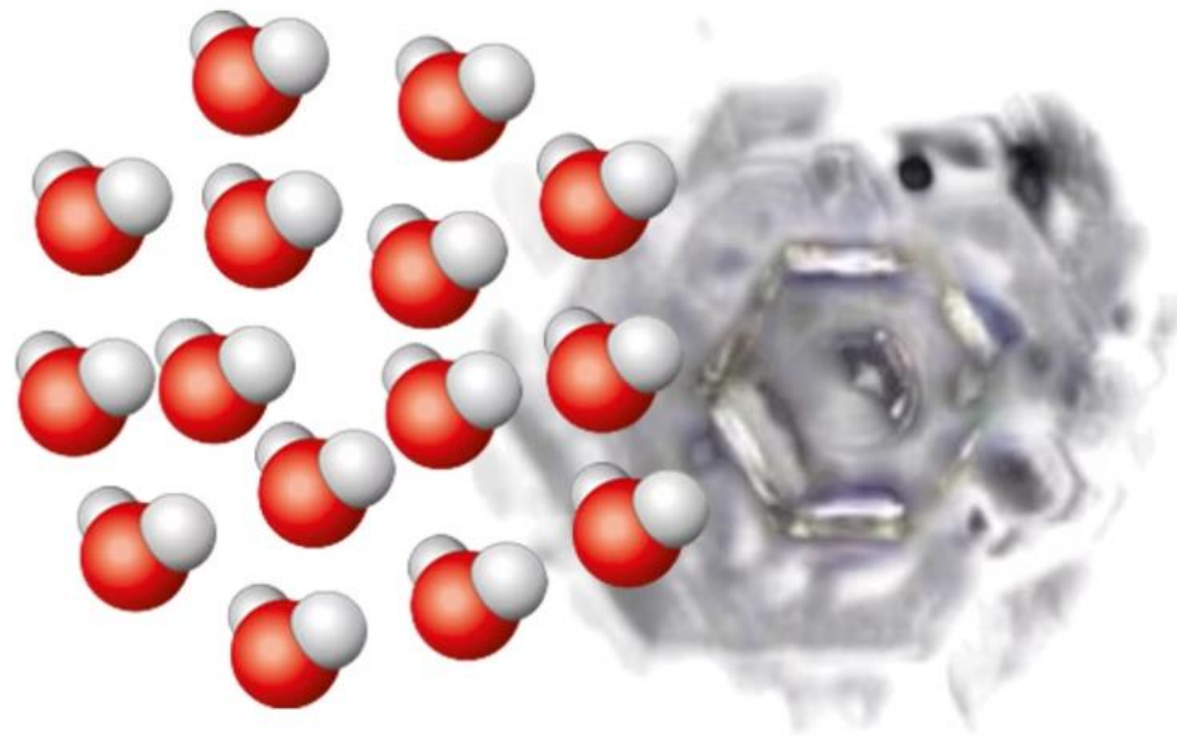

# FAR FROM THE SOURCE

Macrocluster

(DEAD WATER)

agglomerates of 15,20  
molecules

The water has low vital energy  
and its crystals are deformed  
and irregular.

# Benefits for Wellbeing

Microscopic examination of samples of living waters and dead waters clearly shows the different geometry of the molecules, harmonious the first deformed the second.

It could be concluded that a physically better ordered water may correspond to better beneficial properties.

Structured water is associated with various benefits for wellbeing, including better hydration, improved digestion, and increased energy.

## Energy values of water and some comparisons

Bovis unit value drops to around **1,300**  
B.U. in bottled waters after 7/8 days.

## The Importance of Water

Water memorizes the information it comes into contact with

The higher the Bovis value, the more health benefits you obtain

### Tap Water

1,000-4,000 BV: loses vitality in the pipes. Structured Water

IWS

60,000 BV:

Acquires energy and vitality

## In Conclusion

### Living with High Energy

Energy is a fundamental part of our daily lives, and the way we manage it can make a significant difference in our environmental impact.

**IWS** recognizes the importance of energy through water and is dedicated to helping people make informed and sustainable choices.
